

Yusuf Dirawi | Astoria, NY 11106

[347-768-5812](tel:347-768-5812) | yousifaldirawi@gmail.com | [linkedin.com/in/yusuf-dirawi](https://www.linkedin.com/in/yusuf-dirawi) | github.com/yuss93 | yuss93.github.io

Computer Engineering student with hands-on experience in full-stack web development, hardware design, and AI integration. Seeking an internship to contribute to software, embedded, or hardware engineering projects.

EDUCATION

Bachelor of Engineering, Computer Engineering, The City College Of New York, May 2027

CGPA: 3.822

Associate of Science, Electrical Engineering, LaGuardia Community College, June 2024

CGPA: 3.965

RELEVANT COURSEWORK

Data Structures, Algorithms, Operating Systems, Software Engineering Laboratory, Computer Organization, Assembly Language, Computer System Design Laboratory, Discrete Mathematics, Logic Design, Digital Integrated Circuits, Linear Systems I & II, Electronics, Probability & Statistics, Electromagnetics, Computer Networks, AI & Machine Learning.

QUALIFICATIONS

Programming Languages: Python, C++, JavaScript, HTML, CSS, VHDL.

Frameworks & Tools: Flask, FastAPI, Git, GitHub, SQLite, Electric EDA, Quartus, ModelSim, Multisim, LabVIEW.

Technical Skills: Data Structures & Algorithms, REST API Development, Web Development, VLSI Design & HDL.

Development Practices: Version Control, Debugging, Technical Documentation.

Languages: Arabic.

PROJECTS

Senior Design I – GPU-Accelerated Data Science (C++, Python, NVIDIA CUDA) | Fall 2026

- Building GPU-accelerated data science applications using NVIDIA CUDA, leveraging C++ and Python for massively parallel computing workloads, data analytics, and AI pipelines.
- Collaborating on a group project proposal targeting computing efficiency or AI/ML domain applications, applying GPU parallelism and CUDA optimization techniques on real datasets.

ChefAI – AI-Powered Recipe Generator (Python, FastAPI, Flask, Vertex AI, HTML/CSS, JavaScript)

- Built and deployed a full-stack AI recipe generator integrating Vertex AI generative models with a responsive, user-friendly frontend interface accessible from any device.
- Designed REST APIs with FastAPI and validated AI output consistency across 50+ test prompts.

Task Tracker Web App – Flask, SQLite, Python, HTML/CSS

- Developed a full-stack task management app with user authentication, session handling, and SQLite data storage.
- Implemented 5 features for task creation, editing, and progress tracking across responsive HTML/CSS dashboard.

Electronics / Hardware Projects – Digital Clock & Audio Transmission System

- Built a digital clock circuit using counters, decoders, and 7-segment displays with precise timing logic.
- Designed a microphone-to-radio audio transmission system with amplification and modulation circuits.

4-Bit Multiplier – Transistor-Level Design (Electric EDA, LTspice, IRSIM)

- Designed full transistor-level schematic and layout of a 4-bit multiplier using Electric EDA.
- Verified functionality through analog simulation in LTspice and logic simulation in IRSIM.

Mansion of Destiny — C++ & JavaScript yuss93.github.io/mansion-of-destiny/

- Built a console adventure game in C++ using OOP (abstract classes, inheritance, polymorphism)
- Ported full game logic to a live browser version using JavaScript, HTML, CSS & Web Audio API
- Features 10 rooms, turn-based boss combat, inventory system, and a global leaderboard

EXPERIENCE

Independent Stock & Options Trader

August 2021 – January 2023

- Analyzed equities and options using MACD, RSI indicators and candlestick charts on Robinhood, Webull.

Driver/Chauffeur – Uber, Lyft, Private Clients New York, NY

September 2017 – Present

- Maintained a 4.99/5 rating across 10,000+ trips, demonstrating reliability and time management.

HONORS & AFFILIATIONS

- Dean's List, 2022 – Present
- Gutman Transfer Scholarship Recipient, 2024 – Present
- Member, Phi Theta Kappa Honor Society, 2023 – Present
